

www.snmmi.org

SNMMI Members,

Below, please find a link to a brief survey regarding the status of a long-term supply of medical radioisotopes. The Nuclear Energy Agency is currently reviewing its policy concerning problems that threaten the reliable global supply of the molybdenum-99 (^{99}Mo) and technetium-99m ($^{99\text{m}}\text{Tc}$) supply chain. Any changes to their policy will be based on the input from key supply chain participants such as the Society of Nuclear Medicine and Molecular Imaging.

Please take a moment to review and fill out this survey to the best of your ability. If you are not the most qualified individual at your facility to answer these questions, please forward this on to the most appropriate person. Your input will be a valuable tool in securing the future of our industry. The survey will close on Monday, May 12.
